

OPERATING INSTRUCTIONS

THE NORELCO DUO-VUE ANOTHER TELEVISION PRODUCT OF NORTH AMERICAN PHILIPS IS DESIGNED FOR BOTH SMALL PICTURE VIEWING WITH AN EXISTING TABLE MODEL TELEVISION RECEIVER AND FOR LARGE 3 x 4 FOOT MOVIE SCREEN VIEWING.

FOR SMALL PICTURE VIEWING

The Duo-Vue combination may be located in any convenient position in the room.

Turn the Duo-Vue function switch (2) to "Direct View" position (to the left) and operate your television receiver in the normal manner.

FOR 3 x 4 FOOT MOVIE SCREEN VIEWING

Roll the Duo-Vue combination to a position in which the rear of the cabinet will be about 8 feet from a 3 x 4 foot movie screen (or an equivalent white surface). The room lighting should be subdued as required for home movies.

Turn the Duo-Vue function switch (2) to the "Direct-View" position (to the left). Switch on your television receiver and adjust it for a satisfactory picture.

Turn the Duo-Vue function switch (2) to the "Projection" position (to the right). After about 30-40 seconds the picture will appear on the movie-screen.

When operating the Duo-Vue for 3 x 4 foot pictures all your receiver controls should be used in their normal manner, except the Brightness and Focus controls.

Regulate the Brightness control (3) and the Focus control (4) for the most satisfactory picture.

Move the Duo-Vue cabinet slightly towards and away from the screen until the picture is clearly in focus on the screen. At this point a re-setting of the Focus control (4) may improve the picture.

If the picture is too high or too low on the movie-screen, adjust the tilt control (1) until it is properly positioned.

NOTE

The glass on the projection unit at the rear of the Duo-Vue cabinet should be cleaned occasionally with a soft cloth.
