

## UNPACKING INSTRUCTIONS

FOR

### DU MONT "CLUB" TELESET

It is important that the instructions below be followed to insure proper operation and to provide ease of servicing facilities;

1. Remove two (2) chassis hold-down bolts from bottom of cabinet. As you face the front of the cabinet, one bolt will be found about 4" in from the front and 2" in from the right hand side. The other bolt is the same distance in from the front and 18" in from the right side. Both can be removed with an ordinary screw driver. The removal of these two bolts will allow the removal of the main receiver chassis for any servicing reason, without disturbing the position of the cabinet itself.
2. The tuning control panel is concealed by a tamper-proof metal box, forming a part of the cabinet. This box cover, or lid, is secured by means of two (2) studs having a "Phillips" type head. A special "Phillips" head screw driver is furnished and attached to this teleaset.
3. The A.C. Power Cord will be found coiled and laying inside the ventilator slot above the AC Power Cord hole. The AC Power Cord is located on the right side of the cabinet in the rear as you face the front of the cabinet.
4. Be sure the control knob marked "Tone-On-Off" is in the "Off" position before the AC cord plug is connected to power receptacle.
